Senior Scientist

Tata Consultancy Services-Research

Objective of Event: The Internet of Things, or the IoT is a vision for a ubiquitous society wherein people and "Things" are connected in an immersively networked computing environment, with the connected "Things" providing utility to people/enterprises and their digital shadows, through intelligent social and commercial services.

- The main objective is to know how real-time data and advanced analytics, cities can optimize their transportation networks and provide better mobility options for residents and commuters.
- Data Analytics and Insights: The data collected by IoT sensors can be analyzed using advanced analytics techniques to identify traffic patterns, congestion hotspots, and peak traffic hours. This insight allows traffic management authorities to make informed decisions and implement targeted interventions to improve traffic flow and reduce congestion.

Summary of the Event: The Technical Talk on IoT for Smart Mobility was conducted on 12th Feb 2024 for the students registered under the DSCE ISE ACM Student chapter. Around 10 ACM professional faculty members and 30 students attended the event. Dr. Annapurna P Patil, Dean Academic and HoD, Dept of ISE, introduced the speaker about his achievements and welcomed the speaker.

DSCE ISE ACM STUDENT CHAPTER

"Hackman v7" (Sponsored by ACM)

2024 odd Semester	ACM Faculty Sponsor :Dr.Rajeshwari J
DATE:June 8th and 9th 2024	Faculty Cordinators: Dr. Madhura J Prof. Bharath C

INTRODUCTION

The hackathon event, Hackman v7, was a remarkable gathering of innovative minds and technical talents held on the 8th and 9th of June, 2024. This prestigious event was organized by the Genesis student forum and ACM student chapter, an

active and dynamic group within the Information Science and Engineering Department of Dayananda Sagar College of Engineering. Hackman v7 aimed to foster creativity, problem-solving skills, and collaborative teamwork among engineering students, providing them with a platform to showcase their technical prowess and develop cutting-edge solutions.

The meticulous planning and execution by the organizing team, composed of dedicated 2nd, 3rd, and 4th-year students, were instrumental in the event's success. Their efforts, combined with the support of our generous sponsors—EDWAY, Wow Fitness, ACM, and Technogrip—ensured that Hackman v7 was not only a competition but a comprehensive learning experience. The seamless registration process via hackman.in, the diverse range of workshops and mentorship sessions, and the high standard of projects presented all contributed to making Hackman v7 a memorable and impactful event.

The collaboration between the Genesis student forum, the Information Science and Engineering Department, and the sponsors was key to the success of Hackman v7. The collective efforts of the organizing team and the sponsors created a conducive environment for innovation, learning, and collaboration, making Hackman v7 a memorable and impactful event for all participants.

DR. B G PRASAD
Principal, DSCE

DSCE ISE ACM STUDENT CHAPTER of department of Information Science and Engineering, Dayananda Sagar College Of Engineering organized a technical talk on Guidelines For Writing Research Paper in VIRTUSA COE LAB ISE Department on

24th August 2023. The technical talk was open to all the members of ACM in information science department.

OBJECTIVE-

The main objective of conducting this technical talk was to improve the students knowledge about writing research papers in a more professional manner. Students even interacted with ACM coordinators about how to write research papers.

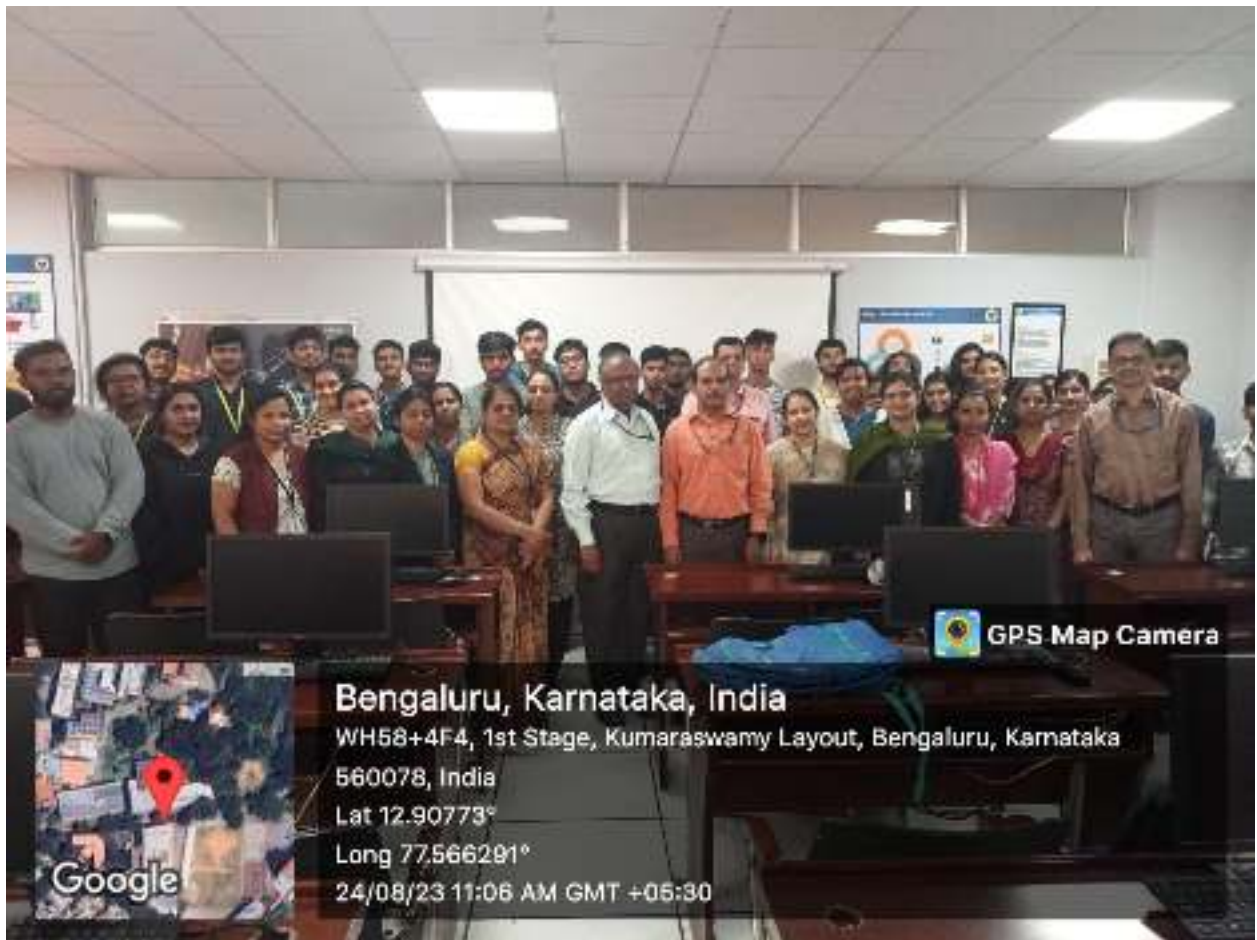

Several students who participated in the talk received appreciation on their ideas and were also motivated for converting their "IDEAS" into "RESEARCH". Several students expressed their views and thoughts about being in research. The main motive about the talk was to be more informative about doing research papers of HOW MUCH TO BE WRITTEN, ITS ADVANTAGES AND THEIR BENEFITS. We as a part of ACM student chapter are lucky enough to attend this talk and gain knowledge about it and we r thankful for the teachers and coordinators to give us such an opportunity to participate in the talk and gain knowledge.

CONCLUSIONS-

Positive comments have been received about the technical talk from the students of ACM team and they have been successful. We thank the department of information science, dayananda sagar college of engineering for letting us use the IBM COE lab to run this talk successfully. We believe the talk was knowledgeable to all. We certainly enjoyed organizing them. The concentration level at the talk was intense. We hope that the future talks and contests will be with same concentration and enthusiasm as we had for this contest.

Finally, we hope that our technical talk will be an inspiration to others and would take as an inspiration to conduct them.

DSCE ISE ACM STUDENT CHAPTER

"Code Breakers Quest"

2023 Even Semester	ACM Faculty Sponsor :Dr.Rajeshwari J
DATE:June 26th July 2023	Faculty Cordinators: Prof SreeVidya

Objective of Event: Code Breaker's Quest is a Technical Treasure Hunt organized for ACM Registered Students to challenge the students to think and use their creativity to solve clues in a technical way.

Summary of the Event: The event was conducted on 26th July 2023 at 2.00 PM in ISE Block, DSCE. The contest comprised of 5 Questions starting from easy to difficulty level for coding. Totally 11 out of 17 Students participated in this event.

Below are the questions framed for Code Breaker's Quest competition.

Q. No.	Question	Solution
1	You've discovered a mysterious encrypted file during the treasure hunt. Your task is to decrypt the file using a custom encryption algorithm. The algorithm works as follows: The file contains a series of integers separated by spaces. You need to reverse the order of these integers. For each integer, subtract 10 from it and convert it into its corresponding ASCII character. The resultant answer in its correct formation will lead you to your destination 175 114 122 119 75	Amphi
2	Within the intricate web of binary data lies a ciphered code, holding the key to unlock the coveted treasure. Embrace the challenge and delve into the depths of this enigma. Begin with the binary sequence: 11110100. Apply Negation operation. Next, Apply XOR operation between the resulting bit and the Room number which contains the centre of India. Apply AND operation between the resulting bit and the Room number where you have to think Dynamically to solve the problem. Add 12 to the result. Finally, convert the binary back to decimal form to reveal the secret key. Let your perseverance guide you to the hidden treasure!"	209
3	You find yourself in a mysterious forest, and in the center, there	308

	stands a massive ancient tree adorned with intriguing symbols. As you approach, the tree comes to life and speaks: "Welcome, seeker of treasure! To claim the hidden riches, you must navigate the depths of my binary tree labyrinth and unlock its secrets. Your journey begins with the following instructions: 1. Each node in the binary tree contains either an arithmetic operation (+, -, *, /) or a number. 2. The tree is structured as follows: <pre>graph TD Root["[*]"] --> L1L["[+]"] Root --> L1R["[/]"] L1L --> L2L1["[12]"] L1L --> L2L2["[2]"] L1R --> L2R1["[-]"] L1R --> L2R2["[*]"] L2R1 --> L3R1["[+]"] L2R1 --> L3R2["[3]"] L2R2 --> L3R3["[1]"] L3R1 --> L4R1["[7]"] L3R1 --> L4R2["[4]"] L3R2 --> L3R3 L3R3 --> L4R3["[-55]"]</pre> 3. Traverse the tree in an in-order manner (left subtree, current node, right subtree), and perform the arithmetic operations when you encounter them. 4. Keep track of your progress as you move through the tree. 5. To make things more interesting, you'll need to solve a mathematical equation related to the nodes you encounter. Note - use appropriate parentheses as soon as you finish one subtree.	
4	The Output of this code will lead you to the next clue: <pre>#include <iostream> using namespace std; int clue(int A, int B) { while (A > 0) { A--; B++; } }</pre>	107

	<pre> } while (A < 0) { A++; B--; } return B; } int main() { int A = 6, B = 101; cout << clue(A, B); return 0; } </pre>	
5	Solve the following C++ code to get the IP address (i.e x.y.z.w) and Guess the location for the next chit using that ip address. <pre> #include <stdio.h> int main() { unsigned char a = 23, b = 3,c=8,d=255,e=54,g=96,f=115; printf("x = %d\n", a & b); printf("y = %d\n", c >> 1); printf("z = %d\n", d ^ e); printf("w = %d\n", g ^ f); return 0; } </pre>	201
